

A pink piggy bank character with large eyes and a pearl necklace is seated at a table. It is holding a small floral teacup in its right hand and a fork in its left. On the table in front of it is a chocolate cake with red decorations, a small bowl of condiments, and a floral teapot. The background is a kitchen with white cabinets and a window. Several colorful flying insects, including bees and dragonflies, are scattered throughout the scene.

zone¹⁰

The air-conditioning system that scores a 10 for efficiency and control.

The advantage of 20 years of innovation.

Advantage Air is an Australian company, based in Perth, Western Australia. Since 1990, we've been researching, designing and manufacturing air-conditioning systems in Australia, specifically for Australian conditions.

We take great pride in producing a home grown product that is world class – and we have the 6 patents, 24 registered design marks, 4 trademarks and 2 design marks to prove it.

Our systems are Aussie made and Aussie tough; they'll withstand the demands of a Queensland summer, Hobart winter or four seasons in one Melbourne day. Our commitment to energy efficiency means you won't pay dearly for your comfort.

While we are at the forefront of technology, we believe in providing old-fashioned personal service. We are here to help and being local, parts and servicing are always readily available. Because we'd hate for you to ever lose your cool.

zone¹⁰
gives me more
zones for more
flexibility

More zones equal more control.

There are two things any good air-conditioning system must deliver: comfort and control. The more control you have over the system in terms of how much air goes to which rooms, the more comfortable you will feel.

It seems like an obvious thing to point out, but if your home has more than 4 rooms, your air-conditioning system needs to have more than 4 zones if you want a comfortable and efficient system.

That's why Advantage Air created Zone10. It has (surprise, surprise) 10 zones so each room of your home is zoned independently.

Zoning rooms individually saves energy.

As Zone10 zones each room individually, you pick and choose precisely which rooms receive conditioned air. You can save energy by only air-conditioning the rooms you are actually using.

With a standard 4 or 5 zone system, you just don't have this flexibility. As with the diagram on the right, they often have several rooms grouped under each zone.

Picture this; in a typical 4 bedroom house all 3 secondary bedrooms are zoned together. One could be a guest bedroom, one a gym and the other for the child who visits on holidays. Whenever one of these rooms is occupied you need to condition all 3, not exactly the smartest way to efficiently air-condition a home.

Zone10 dumps the permanent Dump Zone.

Standard systems also waste energy by having a permanent dump zone (also called constant zone). This zone must remain permanently open to prevent excess air build-up damaging the ductwork in the ceiling. This zone can occupy up to 25% of your home. You may only want to cool the study, but because it's clumped with 3 bedrooms and is not part of the dump zone, you end up paying to air-condition three quarters of your home. What a waste!

Advantage Air's solution was to create an Electronic Default Constant that only opens a pre-selected dump zone when excess air builds up. Zone10 continually monitors the airflow and will open and close the dump zone as needed.

Zone10 does more than other systems because it gives you better control.

Stay comfortably in control.

The Zone10 has a touch screen controller that not only allows you to select which rooms receive conditioned air, but how much. You can adjust the airflow to any room from 10 to 100% capacity. Adjustments are made in gentle 10% increments so you can achieve your optimum comfort level. Gone forever are the turn it up turn it down tussles; everyone in your home can personalise the airflow to their room.

This function also comes in handy if you have a two-storey home, or a lot of west facing rooms. As these rooms get hotter than the rest of the house, it allows you to send more air to them as they heat up during the day.

Scheduling to save energy.

This intuitive touch screen is your key to unlocking big energy savings through smart scheduling. You can schedule a week's worth of programs. For example, instead of air-conditioning bedrooms all night, you can program the system to turn off every night after you have fallen asleep. Or you can program your system to come on before the temperature inside becomes too hot or cold. This allows you to achieve your desired temperature in a more energy efficient manner.

Take control with the Zone10 app.

Advantage Air's custom designed Zone10 app is an optional extra to the Zone10 system and allows you to turn your iPhone or iPad into a remote control. Your home Wi-Fi network will allow you to control your air-conditioning system through your Apple device without getting off the couch. How smart is that!

Peace of mind warranty.

Our components are well known in the industry for their quality, precision, strength and durability. To prove our confidence, Advantage Air provide a:

- 10-year warranty on all ducting and mechanical components
- 5-year warranty on all electronic controls.

Deactivation feature.

Please note: This system can be deactivated 21 days after successful installation and requires a 4 digit code to reactivate the system.
